Lazarus Eagle

Compression therapy people actually wear.

Improving recovery through intentional engineering

Brady Souma, Founder · October 2026

8 in 10 people buy compression socks.
Only 1 in 10 actually wear them.

“They’re too tight.”

“They’re ugly.”

“They’re hard to put on.”

“They’re hard to take off.”

So we fixed that.

Source: from 300+ Quotes from customer discovery interviews

Vein disease is common in older adults, and most common in veterans

1 in 2 older Americans

4 in 5 older veterans

33M
Americans over 51 at risk of varicose veins

71M
Americans will be 65+ by 2030, about 1 in 5

900K
Untreated clots can travel to the lungs and become life-threatening

Sources: 73M — U.S. Census Bureau · Hamdan, JAMA, 2012

A $3.4B market, with a clear accessible first beachhead

$3.4B — Global compression therapy market · 7% annual growth

$1.5B — North American market

$450M — VA compression spend in the U.S.

$1.5M/yr — Our 2-year target · 30%/yr growth

0.3%

of the VA's compression spend is all we need to hit our target

Why start with the VA

4 in 5 older veterans are affected, and the VA buys directly through DME partners.

Sources: $1.5B — Nova One Advisor · [add sources for $3.4B and $450M]

Giving you back the control

Same compression. None of the pain.

Regular socks

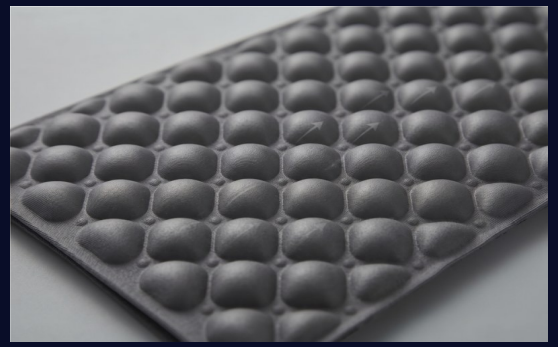

Tight elastic textile

Hard to put on and take off

Lazarus

Precisely pressurized air cells

Easy on, easy off, breathable

You set the pressure

Inflate to the prescribed level, then adjust any time as swelling changes.

The leaders sell tight elastic. We sell adjustable air.

Company	Design	Price	Patient experience	HCPCS eligible
Jobst (Essity)	Knit elastic stocking	$45–$100	Hard to put on; tough on sensitive skin	✓
Sigvaris	Knit elastic stocking	$45–$100	Hard to put on; tough on sensitive skin	✓
circaid (medi)	Adjustable inelastic wrap	$45–$100	Bulky Velcro bands; clinical look	✓
Lazarus Eagle	**Inflatable air-cell sock**	**$20 target**	**Adjustable pressure; easy on and off**	**Pursuing**

Jobst is #1 and medi (circaid's parent) is #2 in U.S. graduated compression stockings. Both sell static garments that can't change pressure.

Start with a simple sock. Grow into monitoring.

Phase 1 · 2027

Lazarus compression sock

- $20 adjustable compression sock
- Sold through VA and DME suppliers
- Billed under existing HCPCS codes

→

Phase 2 · 2029+

Smart monitoring sleeve

- Bioimpedance sensing tracks leg swelling at home
- Flags problems before they become readmissions
- Sold to hospitals and health systems

Why us

Brady Souma, Founder

Patent pending

Provisional application filed with the USPTO, July 2026

Hardware engineering pedigree

4 years of Engineering experience at Apple

Published researchers

Wearable bioimpedance sensing, Yeo Lab at Georgia Tech

Innovators Scholarship

Only recipient of the Innovators Scholarship at Georgia Tech

Most importantly, this is personal to us.

Patent: non-provisional due July 2027

Roadmap to launch

Pre-seed 135K → validation, manufacturing, clearance

Seed $1.8M → launch and scale

Long-term vision

2028 · Scale: national DME, senior living, and PT clinic channels
2029+ · Phase 2: bioimpedance smart sleeve to prevent hospital readmissions

Our ask

We’re raising

$135K

pre-seed

to take Lazarus from prototype through FDA clearance to a February 2028 launch.

Manufacturing

ISO 13485 contract partner and first production run

30%

FDA 510(k)

Bench, biocompatibility, and performance testing

40%

Pilot and launch

Emory clinical pilot and VA/DME onboarding

30%

We are also looking to partner with anyone in the Manufacturing Field to help support our prototyping and validation
